Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

## ALIGNMENTS

 RESULT 1 S00616
 parasporal crystal protein, wax moth-specific - Bacillus thuringiensis (strain galleriae N'Alternate names: delta-endotoxin; parasporal crystal protein positive chain
C.Species: Bacillus thuringiensis
C;bate: 31-Dec-1988 #sequence_revision 31-Dec-1988 #text_cnange 09-Jul-2004 C;Accession: S00616
R;Chestukhina, G.G.; Kostina, L.I.; Zalunin, I.A.; Khodova, O.M.; Stepanov, V.M. FRBS Lett. 232. 249-251. 1988
A; Title: Bacillus thuringiensis ssp. galleriae simultaneously produces two delta-endotoxi
A.Reference number: S00615
A; Molecule type: protein
A; Residues: 1-11 < CHE>
A;Cross-references: UNIPROT:Q7M154
C; Comment: This toxin is effective against the larvae of Galleria melonella (greater wax
C,Superfamily: parasporal crystal protein C;Keywords: delta-endotoxin

Peptides AAY9245-Y9313 represent of the peptides of the invention. The peptides act by twe inhibition of the binding of TGF-bl to its receptors, e.g. inhibitions of stimulation of Collagen synthesis in liver cells inhibitors of stimulation of collagen synthesis in liver cells sitors of synthesis of proteolytic enzymes able to degrade the lular matrix. The peptides, their mimetopes and/or DNA (or on systems) encoding the peptides are used for treatment of liver specifically cirrhosis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to synthetic peptides that antagonise the binding of transforming growth (TGF) factor betal (TGF-bl) to its receptor in vivo which have partial anino acid sequences identical, or similar, with those of TGF-bl and/or its receptors Peptides AAY92945-Y9313 represent examples of the peptides of the invention. The peptides act by competitive inhibition of the binding of TGF-bl to its receptors, e.g. they are inhibitors of stimulation of collagen synthesis in liver cells and inhibitors of synthesis of proteolytic enzymes able to degrade the extracellular matrix. The peptides, their mimetopes and/or DNA (or
                                                                                                                                                                                                                                                                       Hepatotropic, antagonist, transforming growth factor betal, IGF-bl; competitive inhibition; collagen synthesis stimulation inhibitor; liver; extracellular matrix degradation inhibitor; mimetope; cirrhosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Peptides that antagonize binding of transforming growth factor betal, useful for treatment of liver disease, especially cirrhosis, are partial sequences of the factor or its receptors.

This invention describes novel antibodies that immunospecifically bind to B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the Lymphocyte Stimulator (TNF) super family and induces B cell tumour necrosis factor (TNF) super family and induces B cell controlleration and differentiation. The antibodies G the invention have cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antibheumatic and antiALDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be amountained to treat diseases associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and activity such as cancer, immune, and autoimmune disorders and immunodeficiency (e.g. common variable immunodeficiency (CVID) and acquired immunodeficiency syndrome (AIDS)). ABP43990-ABP41228 represent the antibodies and fragments of the antibodies described in the method of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
Antibodies against B Lymphocyte Stimulating polypeptides, useful for the diagnosis and treatment of cancers and immune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

Vaughan TJ, Hilbert D;

Choi GH,

This invention relates to novel antibodies that immunospecifically bind to B lymphocyte stimulator (BLyS). The BLyS gene has been mapped to chromosome 13434 and encodes a protein that is a member of the tumour necrosis factor superfamily and induces both in vivo and in vitro B cell proliferation and differentiation. Specifically, it refers to single cain antibody molecules (screy) derived, preferably, from the variable heavy CDR3 region that immunospecifically bind to a polypeptide, or fragment thereof, of either human, murine, rat or monkey BLyS. The freament invention refers to the use of such antibodies in various methods for the detection, diagnosis and prognosis of diseases related to the aberrant expression or inappropriate function of BLyS or its receptor. As uch, these compositions are useful for identifying immune disorders including myasthenia gravis and multiple sclerosis, inflammatory disorders e.g. asthma and rheumatoid arthritis, infectious diseases such as AIDS and proliferative disorders including leukaema, carcinoma and lymphoma. Accordingly, they can be described as exhibiting various activities such as antirheumatic, antialthritic, neuroprotective, activities such as antiartheumatic, antialthritic, neuroprotective, caliniting manalogy, they can be described and cytostatic. This peptide sequence is a single chain antibody variable heavy CDR3 peptide that immunospecifically binds BLyS of the invention.

This invention describes a novel method for the detection of a mammalian infection by an acid-resistant microorganism (A) by treating a faecal seample with at least two different monoclonal antibodies (WAD) for their fragments or derivatives) or aptamers (collectivels) (I)) and detecting formation of a complex (C) between (I) and the corresponding antigen of formation of a complex (C) between (I) and the corresponding antigen of (Ag). The first and second (I) bind to epitopes of different antigens (C) in at least some mammals, and have either: (i) their native structure; or infected or immunized with (A), or its extract. Jysate, derived protein or fragment, or with a synthetic peptide. Practically all mammals display at least one of the specified epitopes. The method is used to detect infection by acid-fast bacteria, particularly of the genera Helicobacter, Mycobacterium and Campylobacter, aparticularly of the genera Helicobacter, contexpensive and easily standardizable diagnosis, despite possible contexpensive and easily standardizable diagnosis, despite possible contexpensive and easily standardizable beta-urease-binding contexpensive contexpensive and a fragment of a H. Pylori H. Pylori Contexpensive and a fragment of a H. Pylori Contexpensive contexpensive and a fragment of a H. Pylori Contexpensive contexp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Detecting infection by acid-fast microbes for diagnosis of Helicobacter pylori, comprises reacting a fecal sample with two binding reagents for

This invention describes a novel method for detecting, in a mammal, infection by an acid-resistant microorganism (A) which comprises reacting a fecal sample with: (I) a receptor (R) such that a complex is formed with (A) or (I); two different R so that a three-part complex is formed with Ag, and the formation of a complex detected. R are specific for an Ag which, after passage through the intestines, at least in some mammals, retains a native (or corresponding) structure against which the mammal produces antibodies (when immunized or infected with (A), or its extracts, lysates or derived proteins (or fragments) or synthetic peptides). The products of the invention have antibacterial activity. The method is used to diagnose infection by Helicobacter, C ampylobacter or Mycobacterium, particularly H, pylori (most preferred), the hepatica, C. jejuni and M. tuberculosis, and also to monitor the progress of treatment. Receptors, particularly antibodies, directed against Ag can be used therapeutically for treatment of infections. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        infection. This sequence represents a complementarity determining region (CDR) from an antibody generated against a Helicobacter pylori antigen (catalase or beta-urease) which is used to illustrate the method of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           acid-resistant microorganism (A), in a mammal, using immunochromatography. The method is used to diagnose infection by an acid resistant microorganism (A), in a mammal, using immunochromatography. The method is used to diagnose infection by an acid campylobacter or Mycobacterium, particularly H. pylori (most preferred), H. hepatica, C. jejuni and M. tuberculosis. The method is rapid, simple, inexpensive and non-invasive, and may indicate the stage of infection. A test strip used in the method may indicate the stage of infection. A present in the sample and only a single receptor provides a reasonably secure diagnosis, with specificity and selectivity improved by detecting several epitopes (of catalase) or different antigens (catalase and betaurease). The method can be automated. This sequence represents a urease). The method can be automated (CDR) from an antibody raised against the H. pylori catalase or beta-urease antigen which is used to illustrate the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Detecting infections by acid-resistant microorganisms, particularly for diagnosing Helicobacter pylori, comprises immunochromatographic detection of antigen in feces.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Heavy chain; light chain; catalase; beta-urease; detection; CDR; antigen;

The invention relates to a novel crystallists recommuning purpopertice of the invention has at least one biological activity of ATP-dependent Clp proteinase, proline dipeptidase, chorismate mutase homology branched-chain amino acid aminotransferase or serine mutase homology branched-chain amino acid aminotransferase chos staines by the construction of the machyltransferase from Staphylococcus aureus, O-acetylserine sulfhydrolase B from Escherichia coli, preprotein translocase secretion by protein or RNA methyltransferase from Helicobacter pylori, or 3-dehydroquinate synthase from Streptococcus unseful in antisense therapy, cholypeptides of the invention are useful in antisense therapy, as diagnostic agents to detect the presence of the target DNA or RNA sequences to which the specifically bind, and in producing recombinant polypeptides. The polypeptides are useful for producing specific antibodies which modulate the action of the polypeptides, and in identifying compounds which modulate the action of the polypeptides and in the treatment in munological response. Sequences given in ADH48561-ADH48641 represent polypeptides and polymelectides that are identified in the represent polypeptides and polymelectides that are identified in the crops of the invention as microbial target sequences.
                                                                                                                      invention relates to a novel crystallised recombinant polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          of the proteins, and primers used for their amplification

BLyS is a member of the tumour necrosis factor (TNF) super family and induces B cell proliferation and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunomdulatory, antithematic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant supression of BLyS. They may also be administered to treat diseases associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and diseases, e.g. systemic lupus erythematosus, rheumatodia arthritis, immunodeficiency (CVID) and and activity such as cancer and activity such as cancer and activity such as cancer, immunodeficiency (CVID) and and activity such as cancer, immunodeficiency (CVID) and and activity such as cancer and activity such as cancer and activity such as cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         acquired immunodeficiency syndrome (AIDS)). ABP43990-ABP47228 represent the antibodies and fragments of the antibodies described in the method of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Antibodies against B Lymphocyte Stimulating polypeptides, useful for the diagnosis and treatment of cancers and immune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

This invention relates to novel antibodies that immunospecifically bind to B lymphocyte stimulator (BLyS). The BLyS gene has been mapped to chromosome 13434 and encodes a protein that is a member of the tumour necrosis factor superfamily and induces both in vivo and in vitro B cell proliferation and differentiation. Specifically, it refers to single chain antibody molecules (screw) derived, preferably, it refers to single heavy CDR3 region that immunospecifically bind to a polypeptide, or fragment thereof, of either human, murine, rat or monkey BLyS. The present invention refers to the use of such antibodises in various methods for the detection, diagnosis and prognosis of diseases related to the aberrant expression or inappropriate function of BLyS or its receptor. As such, these compositions are useful for identifying immune disorders including myasthenia gravis and multiple sclerosis, inflammatory as AIDS and proliferative disorders including leukaemia, carcinoma and lymphoma. Accordingly, they can be described as exhibiting various activities such as antirheumatic, antiallergic and cytostatic. This peptide sequence is a single chain antibody variable heavy CDR3 peptide that immunospecifically binds BLyS of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel antibody that immunospecifically binds to a B lymphocyte stimulator (BLys), useful for detecting and treating diseases or disorders e.g. rheumatoid arthritis, asthma and leukemia.
                                                                                                                                                                                                     antibody; B lymphocyte stimulator; BLyS; tumour necrosis factor; B cell proliferation; differentiation; scFv; myasthenia gravis; multiple sclerosis; asthma; rheumatoid arthritis; AlDS; leukaemia; carcinoma; lymphoma; antirheumatic; antiarthritic; neuroprotective; antiinflammatory; antiasthmatic; antiallergic; cytostatic.

The invention relates to a novel isolated, synthetic or recombinant peptide or polypeptide which includes one or more endothelial cell peptide of the invention has anticulation to the invention by sequences. A peptide of the invention has anticulation typostatic, vasotropic, antiarthritic, dermatological, antidiabetic, antiarthritic, vulnerary, antiulcer, cophthalmological, antidiabetic, antiarthritic, vulnerary, antiulcer, cophthalmological, confidencial, and gynaecological activity. The peptide is useful for promoting, reducing the proliferation and/or migration of the preferably the peptide, to promote proliferation and/or migration of the treated cells, and for reducing or promoting angiogenesis, by treating the cells with an ECBP antagonist, which is preferably the peptide of the invention is also useful for manufacturing a medicament for promoting angiogenesis, by dimixing an enderming antagonist to promote or reduce angiogenesis at one or more sites in a treated mammal. The medicament is useful for promoting or reducing angiogenesis. ECBP sequences are useful for promoting or reducing angiogenesis. ECBP sequences are useful to alter the infectivity spectrum of a viral particle. The present sequence represents an ECBP of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAR67114-17 are anti-inflammatory peptides derived from naturally occuring polypeptides that contain proline or proline/cysteine brackets. These peptides are shortened to form fragments that contain one or more interaction sites of interest. AAR6117 is deriv. from fibrinogen gammalinteractions between fibrinogen and its leukocyte receptor Collb/CD18 integrin (Mac-1). The data collected demonstrates that interaction sites possess activity when present in a polypeptide that differs from the native form. Inclusion of conformation-constraining moieties can have desirable effects on an interaction site. (Also see AAR6701-113 and AAR67118-52 for analogues of coher biologically active peptides contg. an interaction site flanked by conformation constraining sps., eg. RGD
                                                                                                                                                                                                                                                                                                                                                                                                                                            Peptide homologue or analogue with constrained conformation - has proline residues flanking the interaction site to impart greater, or more stable,
                                               anti-inflammatory peptide; fibrinogen gamma-chain; leukocyte receptor; mimic; interaction site; constrained conformation; inhibitor; CD11b; CD18 integrin; Mac-1.

```
The present invention relates to a new pharmaceutical composition comprising a unit dose form of a peptide, or analogue, comprising an expectation those represented by peptides AAY98812-199339 which are derived from various antigens for various human leucocyte antigen class DR molecules, representative of the world wide population. The class DR molecules, representative of the world wide population. The comparable binds to an HLA class II molecule at an IC-50 of less than or equal to 1,000 nM. The pharmaceutical focuses the immune response than or equal to 1,000 nM. The pharmaceutical focuses the immune response conversing selected determinants and could therefore be used in cases of chouse to the peptide concaining pharmaceutical include autoimmune concorned using the peptide concaining pharmaceutical include autoimmune concorned using the peptide archritis, multiple sclerosis, and myasthenia cresponses rheumatoid archritis, multiple sclerosis, and food hypersensitivities. The peptide epitopes can be used to enhance immune responses against other immunogens administered with the peptides.

Concor, hypersensitivities. The peptide epitopes can be used to enhance immune response against other immunogens administered with the peptides cancer, hepatitis B, hepatitis C, AIDS, renal carcinoma, carcinal cancer, hepatitis B, hepatitis C, AIDS, renal carciname, carcinal cancer, hepatitis B, hepatitis C, AIDS, renal carciname, carciname, cancer, hepatitis B, hepatitis C, AIDS, renal carciname, carciname, cancer, hepatitis B, hepatitis C, AIDS, renal carciname, carciname, cancer, hepatitis B, hepatitis C, AIDS, renal carciname, carciname, individuals will be at substantial risk of developing chronic infection.

The selection of appropriate T and B cell epitopes should allow the epitopes of pathogens which are characterized by high sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human leucocyte antigen; HLA class II; antigen epitope; pharmaceutical; immune response; chronic viral disease; cancer; autoimmune disease; rheumatoid arthritis; multiple sclerosis; myasthenia gravis; AIDS;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

```
The present invention relates to a new pharmaceutical composition comprising a unit dose form of a peptide, or analogue, comprising an epitode selected from those represented by peptides AAY98812-99339 which are derived from various antigens for various human leucocyte antigen class DR molecules, representative of the world wide population. The class DR molecules at an IC-50 of less than or equal to 1,000 mM. The pharmaceutical can be used to induce a helper T cell response. The pharmaceutical focuses the immune response towards selected determinants and could therefore be used in cases of chronic viral diseases and cancer. Examples of diseases that can be cromic viral diseases and cancer. Examples of diseases that can be containing pharmaceutical include autoimmune confiseases (rheumatoid arthritis, multiple sclerosis, and myssthania gravis), allograft rejection, allergies, lyme disease, hepatitis, postcrost endocarditis or glomerulonephritis and food gravis), allograft rejection, allergies, lyme disease, hepatitis, postcrost endocarditis or glomerulonephritis and food streptococcal endocarditis or glomerulonephritis and food cancer, hepatitis.

Carcinoma, lymphoma, and condyloma acuminatum. The peptides may also be cancer, hepatitis B, hepatitis C, AIDS, renal carcinoma, carcinal carcinoma, and condyloma acuminatum. The peptides may also be useful as diagnostic or carcinoma, lill be at substantial risk of developing chronic infection. The selection of appropriate T and B cell epitopes should allow the election of epitope based vaccines particularly towards conserved conserv
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ;

The present introduced from those represented by peptides AAY98812-199339 which epitope selected from those represented by peptides AAY98812-199339 which epitope selected from those represented by peptides AAY98812-199339 which care derived from various antigens for various human leucocyte antigen class DR molecules, representative of the world wide population. The peptide/analogue binds to an HLA class II molecule at an IC-50 of less compared selected determinants and could therefore be used to induce a chelper T cell response. The pharmaceutical focuses the immune response towards selected determinants and could therefore be used to induce a chronic viral diseases and cancer. Examples of diseases that can be created using the peptide containing pharmaceutical include autoimmune diseases (rheumatoid arthritis, multiple sclerosis, and mysathanian acceptance diseases (rheumatoid arthritis, multiple sclerosis, and mysathanian acceptance) allograft rejection, allergies lyme disease, hepatitis, post-creagensitivities. The peptide epitopes can be used to enhance immune responses against other immunogens administered with the peptides. Cancer, hepatitis D, hepatitis C, AIDS, renal carcinoma, cervical cancer, hepatitis B, hepatitis C, AIDS, renal carcinoma, and condyloma acuminatum. The peptides may also be carcinoma, lymphoma, and condyloma acuminatum. The peptides may also be used to make monoclonal antibodies useful as potential diagnostic or therapeutic agents. The peptides may also be useful as diagnostic creagents, for example, to determine the susceptibility of an individual condyloma suminantum. The peptides may also be individuals will be at substantial risk of development of appropriate T and B cell epitopes should allow the development of epitope based vaccines particularly towards conserved contrability and malariarial and antibalish and an antibalish and an epitopes should sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New compositions containing immunogenic peptide epitopes for various HLA class II DR molecules useful for inducing helper T cell response.
                                         immune response, chronic viral disease, cancer, autoimmune disease,

Nishimura M., Matsuo H., Sugiyama M.;
"Blasticidin S-producing Streptomyces morookaensis possesses an enzyme activity with hydrolyzes puromycin.";
FEMS Microbiol. Lett. 132.95-100(1995).
-!- FUNCTION: INACTIVATES PUROMYCIN BY CATALYZING THE HYDROLYSIS OF THE AMIDE LINKAGE BETWEEN 1TS AMINONUCLEOSIDE AND O-METHYL-L-TYROSINE MOIETIES. THE OPTIMUM PH IS 8.0 AND THE OPTIMAL TEMPERATURE IS 45 DEGREES CELSIUS.
                                                                                                                                                                                                                                                                                                                                                              -!- FUNCTION: MAY HAVE AMINOPEPTIDASE ACTIVITY.
-!- ENZYME REGULATION: STIMULATED BY DIT. STRONGLY INHIBITED BY ZINC
ION, PERROUS ION, CUPRIC ION, MERCHRY ION, N-BROMOSUCCINIMIDE AND
N-ETHYLMALEIMIDE. PARTIALLY INHIBITED BY COBALT ION.
                                                                                                                  Nishimura M., Matsuo H., Nakamura A., Sugiyama M.; Matsuo A. Borras Cuesta F; WO200031135-A1 Homo sapiens. 23-NOV-1999; 24-NOV-1998; 08-NOV-2000 02-JUN-2000. AAY92951; RESULT 1 AAY92951 THE STATE OF THE S

The invention relates to synthetic peptides that antagonise the binding of transforming growth (TGF) factor betal (TGF-bl) to its receptor in vivo which have partial amino acid sequences identical, or similar, with those of TGF-bl and/or its receptors. Peptides AAY92945-Y93131 represent examples of the peptides of the invention. The peptides act by competitive inhibition of the binding of TGF-bl to its receptors, e.g. they are inhibitors of stimulation of collagen synthesis in liver cells and inhibitors of synthesis of proteolytic enzymes able to degrade the extracellular matrix. The peptides, their mimetopes and/or DNA (or expression systems) encoding the peptides are used for treatment of liver disease, specifically cirrhosis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to synthetic peptides that antagonise the binding of transforming growth (TGF) factor betal (TGF-D1) to its receptor in vivo which have partial amino acid sequences identical, or similar, with those of TGF-D1 and/or its receptors. Peptides ANY92945-Y93131 represent examples of the peptides of the invention. The peptides act by competitive inhibition of the binding of TGF-D1 to its receptors, e.g. they are inhibitors of stimulation of collagen synthesis in liver cells and inhibitors of stimulation of collagen synthesis in liver cells and inhibitors act stimulation of collagen synthesis in liver cells extracellular matrix. The peptides, their mimetopes and/or DNA (or expression systems) encoding the peptides are used for treatment of liver disease, specifically cirrhosis
                                                                                                                                                                                                                                                                                                                                                                        Hepatotropic, antagonist, transforming growth factor betal, TGF-bl, competitive inhibition, collagen synthesis stimulation inhibitor, liver, extracellular matrix degradation inhibitor; mimetope, cirrhosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Peptides that antagonize binding of transforming growth factor betal, useful for treatment of liver disease, especially cirrhosis, are partial sequences of the factor or its receptors.

The invention relates to synthetic peptides that antagonise the binding of transforming growth (TGF) factor betal (TGF-bl) to its receptor in vivo which have partial anino acid sequences identical, or similar, with those of TGF-bl and/or its receptors. Peptides AAY22945-Y9131 represent examples of the peptides of the invention. The peptides act by competitive inhibition of the binding of TGF-bl to its receptors, e.g. they are inhibitors of simulation of collagen synthesis in liver cells and inhibitors of synthesis of proteolytic enzymes able to degrade the extracellular matrix. The peptides, their mimetopes and/or DNA (or expression systems) encoding the peptides are used for treatment of liver disease, specifically cirrhosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Hepatotropic, antagonist, transforming growth factor betal, TGF-bl; competitive inhibition; collagen synthesis stimulation inhibitor, liver; extracellular matrix degradation inhibitor; mimetope; cirrhosis.

                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                                                                                                                                                 엄
                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                      The invention relates to synthetic peptides that antagonise the binding of transforming growth (TGF) factor betal (TGF-bl) to its receptor in vivo which have partial amino acid sequences identical, or similar, with those of TGF-bl and/or its receptors. Peptides AAV92945-Y9313 represent examples of the peptides of the invention. The peptides act by competitive inhibition of the binding of TGF-bl to its receptors, e.g. they are inhibitors of stimulation of collagen synthesis in liver cells and inhibitors of synthesis of proteolytic enzymes able to degrade the extracellular matrix. The peptides, their mimetopes and/or DNA (or expression systems) encoding the peptides are used for treatment of liver
                                                                                                                                                                           Peptides that antagonize binding of transforming growth factor betal, useful for treatment of liver disease, especially cirrhosis, are partial sequences of the factor or its receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Hepatotropic; antagonist; transforming growth factor betal; TGF-bl; competitive inhibition; collagen synthesis stimulation inhibitor; liver; extracellular matrix degradation inhibitor; mimetope; cirrhosis.

```
The invention relates to synthetic peptides that antagonise the binding of transforming growth (TGF) factor betal (TGF-bl) to its receptor in vivo which have partial amino acid sequences identical, or similar, with those of TGF-bl and/or its receptors. Peptides AAY92945-Y93131 represent competitive inhibition of the binding of TGF-bl to its receptors, e.g. they are inhibitors of simulation of collagen synthesis in liver cells and inhibitors of synthesis of proteolytic enzymes able to degrade the extracellular matrix. The peptides, their mimetopes and/or DNA (or expression systems) encoding the peptides are used for treatment of liver disease, specifically cirrhosis
                                                                       Peptides that antagonize binding of transforming growth factor betal, useful for treatment of liver disease, especially cirrhosis, are partial sequences of the factor or its receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Hepatotropic, antagonist, transforming growth factor betal, TGF-bl; competitive inhibition, collagen synthesis stimulation inhibitor, liver, extracellular matrix degradation inhibitor, mimetope, cirrhosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Peptides that antagonize binding of transforming growth factor betal, useful for treatment of liver disease, especially cirrhosis, are partial sequences of the factor or its receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to synthetic peptides that antagonise the binding of transforming growth (TGF) factor betal (TGF-bl) to its receptor in vivo which have partial amino acid sequences identical, or similar, with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ب

The invention relates to diagnosing, determining the stage or severity, or indentifying the risk of a subject developing cancer (especially breast cancer), or monitoring the effect of therapy on a subject with cancer, comprising analysing the effect of therapy on a subject with cancer, and detecting Breast Cancer-Associated Protein Isoforms (BPIs). The methods disclosed are used for the diagnosis and prognosis of breast cancer, and for cancer, for determining the severity of breast cancer, and monitoring cancer, for determining the severity of breast cancer, and monitoring the effect of therapy administered to a subject. Antibodies raised against the binding domain of a BPI, the cancer inhibits the function cancer and encorporated into a pharmaceutical composition for treating or preventing breast cancer. The methods use sensitive and specific biomarkers provide early diagnosis of breast cancer, and the fewer side effects that other prior art methods use sensitive and specific biomarkers provide early diagnosis of breast cancer, and the fewer side effects that other prior art methods are more rapid effect with fewer side effects that other prior art methods. The present sequence is a tryptic digest peptide from a BPI of the invention
                                                                                                                                                                                                                                                                             ö
               examples of the peptides of the invention. The peptides act by competitive inhibition of the binding of TGF-b1 to its receptors, e.g. they are inhibitors of stimulation of collagen synthesis in liver cells and inhibitors of synthesis of proteolytic enzymes able to degrade the extracellular matrix. The peptides, their mimetopes and/or DNA (or expression systems) encoding the peptides are used for treatment of liver
receptors. Peptides AAY92945-Y93133 represent

The present invention describes a method for screening or diagnosing ETBS2—related cancer. The method comprises generating ETBS2 overexpression features (EOPS) from test samples of body fluid from the ubject by electrophoresis, and comparing the EOPS in the test sample with that from normal subjects or with an expression reference feature (ERF) in the test sample. Also described: (1) an antibody capable of immunospecific binding to an ETBS2 overexpression protein isoform (EOPI); (2) pharmaceutical compositions comprising an EOPI, a nucleic acid encoding an EOPI, an amount of the above antibody or its fragment, and a carrier; (3) a kit comprising on or more antibodies and/or EOPIs cited above, other reagents and instructions for use; (4) methods of treating or preventing ETBS2-related cancer; (5) methods of screening for or preventing EEDB2-related cancer; (5) method of screening for or identifying agents that interact with or modulate the expression or activity of, one or more EOPIs, EOPI fragment, EOPI-related polypeptides, or EOPI-fusion proteins; (6) a method for modulating the activity of one or more EOPIs, comprising administering to a subject an agent identified by the method of [5]; and (7) a method for identifying are therapy. The method is useful in screening, diagnosing, preventing or treating EEDB2-related cancer, determining the stage or seventity of EIBB2-related cancer, determining the stage or seventity of EIBB2-related cancer, determining the stage or seventity of EIBB2-related cancer, dentifying a subject at the risk of developing EXBB2-related cancer, dentifying a subject at the risk of developing EXBB2-related cancer.

The concern indentifying a subject at the risk of developing EXBB2-related cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a method of screening or diagnosing Alzheimer's disease in a subject. The method is useful for screening, diagnosis or prognosis of Alzheimer's disease in a subject for determining the stage of severity of Alzheimer's disease in a subject, for identifying a subject at risk of developing Alzheimer's disease, or for monitoring the effect of therapy administered to a subject having Alzheimer's disease. The method is also useful in treating vascular dementia, Lewy body dementia, schizophrenia, Parkinson's disease, multiple sclerosis or depression. The inventive method identifies sensitive and specific biomarkers for the diagnosis of Alzheimer's disease in living subjects. It provides therapeutic agents for Alzheimer's disease that works quickly, potently, specifically with fewer side effects. The present sequence represents the amino acid sequence of a Alzheimer's disease-
                                                                                                       ö
related cancer, and for drug screening or drug development. The kit is useful in carrying out the above methods. ABP98940 to ABP99206 represent specifically claimed EOPIs from the present invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Neutrophil Inhibitory Factor was isolated from canine hookworms. The NIF was digested with either endoproteinase ASPM, LysC or trypsin and the resulting proteolytic fragments were sequenced. See AARA2489- AARA2493 for the trypsin fragments. The specification describes mutant Neutrophil Inhibitory Factors (NIF8), where at least 1 of the Asp residues at positions 18, 87, 110, 130, 197, or 223 in the wild type sequence (see AAY23591) is replaced by a Gln residue. NIF8 may be useful for treating shock, stroke, acute and chronic allograft rejection, vasculitis, autoimmune diabetes, rheumatoid atthritis, inflammatory skin diseases, inflammatory bowel disease, adult respiratory distress syndrome (ARDS), ischemia-reperfusion injury contrained may be used as vaccines against parastic caused by the bacterial infection such as sepsis or bacterial meningitis. NIF8 or NIF contrained may be useful for detecting infection of a mammalian host by a parasitic worm, as antihelminic agents, and in the detection and collecting of NIF from tissue homogenates, cloned cells etc. NIF8 may be useful for the detection of a mammalian host of seclul for the detection of NIF mimics or suseful for the detection of NIF mimics of the NIF and inhibitors may also be used as antihelminic agents. AAY23572-90 represent peptide fragments of a canine hookworm NIF,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Antigenic determinant peptide(s) of HTLV envelope glyco:protein - useful for detecting anti-HTLV-I and -II antibodies and as vaccine against HTLV.
                                                                                                        Mutant Neutrophil Inhibitory Factors useful for treating inflammatory conditions and especially to prevent or decrease inflammatory responses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human T-cell leukaemia virus; hydrophilic; conjugate; aggregate;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                        Neutrophil inhibitory factor peptide(s) - derived from nematodes, useful for therapy of inflammatory responses.
                                                                                                                                                                                                                                                                                                                                                               Neutrophil inhibitory factors can be used in compositions to inhibit neutrophil activity e.g. adhesion to vascular endothelial cells, and which are useful in the therapy of conditions which involve abnormal or undesired inflammatory responses. This is a peptide fragment of a neutrophil inhibitory factor from canine hookworm which was designated 124 and obtained by trypsin digestion of the factor. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Neutrophil inhibitory factor; NIF; mutant; shock; stroke; allograft rejection; vasculitis; autoimmune diabetes; ARDS; rheumatoid arthritis; inflammatory skin disease; myocardial infarction; inflammatory bowel disease; adult respiratory distress syndrome; inflammatory bowel disease; adult respiratory distress syndrome; ischemia-reperfusion injury; acute inflammation; bacterial infection; vaccine; parasitic worm infection; antihelminic.

                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to new synthetic hydrophilic peptides (AAY17922-934) that correspond to at least one of antigen determinants of envelope sugar proteins of HTLV-1 and HTLV-11 identified in the B lymphatic corpuscle. When bonded covalently to a carrier molecule, the peptides can induce the production of an antibody having a high titre to the gp46 and sp53 envelope sugar proteins of HTLV-1 and HTLV-11 in mammals. The carrier molecule is preferably a tetanus toxoid and selected from the group of sequences shown in AAX17935-39. The carrier molecule is preferably bonded to the peptide through at least one spacer molecule (preferably a dipeptide glycine). The peptides form effectively immunological response to factors causing virus HTLV-1 and HTLV-11. The method also provides an effective conjugate having the peptide
                                                                                                                                                                                                                                                                                                                                                                                                               Hydrophilic peptide; antigen determinant; envelope sugar protein; HTLV-1;
HTLV-II; B lymphatic corpuscle; gp46; gp63; tetanus toxoid.
                                    sequence of peptide 4 corresponds to residues 129-149 from the HTLV-I
                                              gp46 external envelope glycoprotein. When covalently linked to a carrier mon. the hydrophilic peptide can induce in a mammal the prodn. of high titres of antibodies to gp46 envelope glycoprotein from HTLV-I or -II. The peptide and carrier may be used in vaccines against HTLV-I or -II infection. The peptide may be used in a diagnostic assay to detect the presence and titre of anti-HTLV antibodies. See also AAR34225-57. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Synthetic hydrophilic peptide - comprises 25 unit aminoacid that corresponds to at least one antigen determinant of envelope sugar protein(s) of HTLV-I and HTLV-II.
                                                                                                                                                                                                 .

The phosphopeptides are useful as a medicament or for manufacturing a medicament for the treatment and/or prevention of cancer (i.e. stomach or intesting ancer), diabetes and/or obsity, inflammation, multiple sclerosis, angiogenesis-dependent disease (e.g. solid cancer or metastatic cancer) or infectious disease (i.e. leishmaniasis), or as a suppressor of appetite. These may also be used for preventing or treating congestive heart failure, neurodegenerative diseases, ischaemic events of the brain or demyalinating diseases. The present sequence is one such phosphopeptide from protein tyrosine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New phosphopeptides that inhibit protein tyrosine phosphatases, useful for manufacturing a medicament for preventing or treating e.g. cancer, diabetes, obesity, inflammation, multiple sclerosis or infectious

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

C)Comment: This isoform is novel in that it readily dissociates from bovine pancreatic types.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     A Gene: topI
C.Function:
A.Description: catalyzes ATP-independent transient breakage of DNA phosphodiester bonds
rejoining; this reaction will lead to the conversion of one topological isomer of DNA to
C.Superfamily: bacterial type I DNA topoisomerase
C.Keywords: DNA binding; DNA replication; isomerase; zinc finger
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CyAccession: 84384

Patent No. oillus.

GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: EVANS, Herbert J.
APPLICANT: EVANS, Herbert J.
APPLICANT: EVANS, Herbert J.
APPLICANT: TINE OF INVENTION: Constraining Groups Which Flank A Protein-Protein Interaction TITLE OF INVENTION: Site of Sequences: 153
CORRESPONDENCE ADDRESS:
ADDRESSEE: Foley & Lardner
STREET: Suite 500, 3000 K Street NW
CITY: Washington
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Score 27; DB 3; Length 14; Pred. No. 1.1e+02; Mismatches 1; Indels
                       MEDIUM TYPE: F.LOPPY G18K

COMPUTER: IBM PC compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: Patentin Release #1.0, Version #1.25

CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/934,224

FILING DATE:
PRIOR APPLICATION DATA:
APPLICATION NUMBER: 08/532,818

FILING DATE: 03-MAY-1996
APPLICATION NUMBER: PCT/US94/04294

FILING DATE: 12-APR-1994

PRIOR APPLICATION DATA:
APPLICATION NUMBER: U.S. 08/143,364

FILING DATE: 29-OCT-1993

PRIOR APPLICATION DATA:
APPLICATION NUMBER: U.S. 08/051,741

FILING DATE: 23-APR-1993

ATTORNEY AGENT INFORMATION:
NAME: ISBGEON, JOHN P.
REFERENCE/DOCKET NUMBER: 33,751

REFERENCE/DOCKET NUMBER: 33,751

REFERENCE/DOCKET NUMBER: 040433/0148

Sequence 110, Application US/08934224

GENERAL INFORMATION:
APPLICANT: EVANS, Herbert J.
APPLICANT: EVANS, Herbert J.
APPLICANT: EVANS, Herbert J.
APPLICANT: KINI, R. Manjunatha
TITLE OF INVENTION: Constraining Groups Which Flank A Protein-Protein Interaction
TITLE OF INVENTION: Site
NUMBER OF SEQUENCES: 153
CORRESPONDENCE ADDRESS:
ADDRESSEE: Foley & Lardner
STREET: Suite 500, 3000 K Street NW
CITY: Washington
STATE: D.
Sequence 110, Application US/09231797

Patent No. 6084066

GENERAL INFORMATION:
APPLICANT: EVANS, Herbert J.
APPLICANT: EVANS, Herbert J.
APPLICANT: KINI, R. Manjunatha
TITLE OF INVENTION: Polypeptides That Include Conformation-
TITLE OF INVENTION: Constraining Groups Which Flank A Proten-Protein Interaction
NUMBER OF SEQUENCES: 153

Patent No. 5928866

CENERAL INFORMATION:
PAPLICANT: EVANS, Herbert J.
APPLICANT: EVANS, Manjumatha
TITLE OF INVENTION: Constraining Groups Which Flank A Protein-Protein Interaction
TITLE OF INVENTION: Site
ADDRESSEE: FOLGY & Lardner
STREET: Suite 500, 3000 K Street NW
CITT: Washington
STATE: DC
CONTRY: USA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                             Gaps
